Experience

Research

- 2020–Present **Graduate Researcher**, *Sivak Group*, Simon Fraser University.
Working under the supervision of professor David Sivak, analyzing biological molecular machine systems using the theory of nonequilibrium statistical mechanics. Projects include exploring performance trade-offs in intracellular transport systems, and investigating information thermodynamics in multipartite stochastic systems.

Worked with professor Andrew Rutenberg on various research projects in theoretical biophysics using computational and mathematical methods. Projects included modelling stochastic effects in the process of host cell invasion by *S. Typhimurium* bacteria, developing a theoretical model for the thermodynamics of *in vivo* Collagen fibril growth, and studying the mechanics of double-twist liquid crystal elastomer systems under deformation.
